2160. Minimum Sum of Four Digit Number After Splitting Digits (4 位數整數切分後的最小總和)

傳入一個4位數的正整數 num,請將這4位數字以任意順序組合成2個新的整數,假設它們稱為 new1 及 new2.這兩個新值可以有前導0,原數字的4個位數都要分配給這2個數.

• 例如, num = 2932, 其中有兩個 2, 一個 9, 一個 3. 列出幾種可能的 [new1, new2], 包括 [22, 93], [23, 92], [223, 9] 及 [2, 329].

請回傳所有分配中最小的 new1 及 new2 之和.

Example 1:

Input: num = 2932

Output: 52

Explanation: Some possible pairs [new1, new2] are [29, 23], [223, 9], etc.

The minimum sum can be obtained by the pair [29, 23]: 29 + 23 = 52.

Example 2:

Input: num = 4009

Output: 13

Explanation: Some possible pairs [new1, new2] are [0, 49], [490, 0], etc.

The minimum sum can be obtained by the pair [4, 9]: 4 + 9 = 13.

Constraints:

• 1000 <= num <= 9999
